- No upfront cost.
- \$500 per month plus GST for Australian users.

Safe

- There is zero risk - technical or commercial.
- At the end of the contract we give you 30 days per year of loyalty to unarchive your email.
- Email, is stored to BOTH
 - an offsite datacentre
 - an FTP server on your site
 - using double commit before removed from your email box.
- Operates as a backup as well as archive.

Usage In Your Company

Reduce Email Storage

- Rules based archiving.
- Less email on your server is less hassle and upgrades.

Regulatory, Discovery and Litigation

- We archive email as they are created, we even keep copies of deleted email.
- Email is restored to a separate database for litigation and discovery purposes.
- Search features are standard on email across all users.
- Storage used is read only and tamper proof.

Backup

- Given we archive all email new and old hourly, you can restore a users email file in minutes.
- There is no need for costly tape backup and backup software for email.

Services

Standard Service

- Store to disk, which is RAID and distributed.
- Archive incoming email journal.
- Backup all email.
- Archive/delete old email.
- Leaves behind stub email with summary and URL to recover
- self service via Web based restore, and URL stub based restore
- AES Encryption with your custom key.

Gold Service

- Store to disk and tape.
- Prove storage to tape before archiving emails.
- 24x7 support.
- Web self service with user challenge.

Is Your Business Already Exposed?

Virtually all organisations perform some type of regular backup of their messaging servers in order to restore content in the event of a server crash or other problem. Common practice is to create daily backup tapes that are recycled on a 7, 30, 60 or a 90-day basis. This can be an effective recovery strategy, but it is not a viable archiving strategy. Using this snapshot method means that your organisation never gets a full view of your email repository. Email that is sent and deleted between backups cannot be restored making e-discovery difficult, if not downright impossible. Apart from which, even if your organisation keeps a copy of backup tapes for long term storage, these tapes are typically time-consuming and expensive to restore.

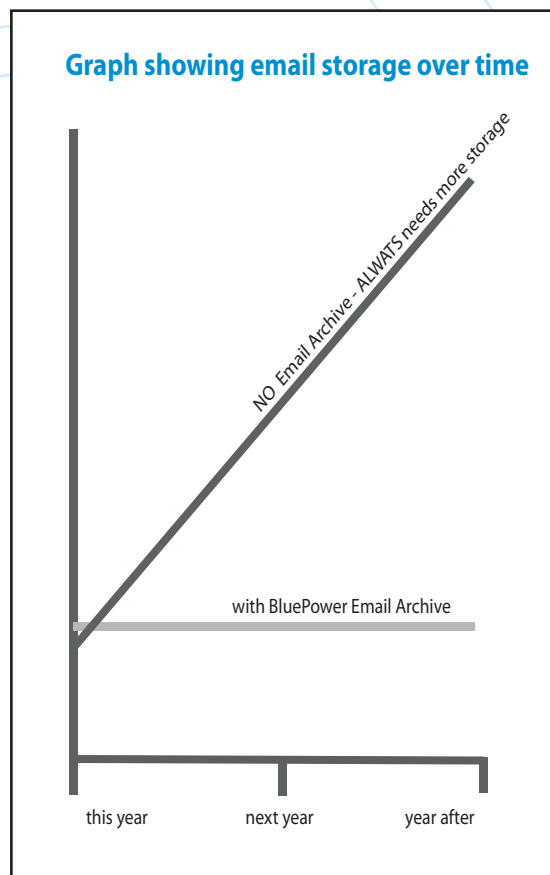

This Is Where BluePower Can Really Help You

BluePower is a new breed of managed services company, one that delivers beyond best practice.

We offer the option of archiving your data at a third-party location (with a choice of multiple data centre facilities either locally or overseas), thereby reducing the burden on your internal IT resources and avoiding the substantial cost of buying hardware and software as well as the inconvenience of maintaining an archiving system. We can facilitate a direct integration with your organisation's email server such that you never have a single point of failure.

BluePower makes it easy. Let us take the headache out of email archiving for you. Trying to work out an archiving solution is hard enough for any single IT department, never mind implementing it.

What does this mean for you and your organisation? No more half-baked email management solutions, which has your IT department fumbling around with tape drives, or trying to manage and ever-growing store of email by freeing up disk space on your servers that you could be using for more customer-focused, business-critical data.

With BluePower Email Archiving Service, why would you risk incurring the additional expenditure of running an email archiving solution in-house? The ever-increasing size of email data stores means you have to deal with operational problems like growing storage from an increased email volume, longer backup and restore times due to system volume load, longer data retention requirements for compliance and litigation, server performance degradation due to email volume and size, server upgrades and consolidation taking more and more time, also due to system volume load. All this time and money trying to come up with a suitable solution in-house is surely best spent elsewhere.

The Benefits Of Getting BluePowered Include:

Agility - we provide your business with an agile infrastructure that will enable you to connect, clean-up, understand, organise, transform, report about and audit distributed content and data.

Accountability - we can help businesses reduce operational risk and comply with government and industry regulations.

Business Continuity - we can help you create efficiencies in workflow processes and improve information availability while protecting sensitive data.

Guaranteed Speedier Response Time - respond quickly and cost-effectively to regulatory measures.

Flexibility - obtain virtually unlimited mailbox space and maximise storage flexibility while minimising costs.

Affordability - get high availability solutions for your applications and manage all types of digital information cost-effectively.

Peace Of Mind - manage your risks by streamlining compliance without the added costs and operational problems of managing an archiving solution in-house
